Creativity in Lighting for Bird Photography

Topic Description:

Birds provide a myriad of opportunities for artistic expression beyond a standard portrait. Whether the photographer utilizes **backlight**, negative space or depth of field, capturing a variety of unique compositions can create a visually stunning bird portfolio. In this workshop, Cameron will explain how to create a thoughtful image that tells a bird's story. He will share descriptions and image examples highlighting various techniques for becoming a more creative bird photographer.

Biography

"I just graduated high school, am 19 years old, and enjoy nature, athletics, and music. I got into photography after birding for a while when I saw someone with a lens clicking shots on a bird walk seven years ago. It seemed so fun, so I tried it with a beginner **digiscope** setup. I was hooked immediately! I love the creative aspect of bird photography, how each viewer sees the scene differently and can create his or her unique vision of the subject. It's fulfilling to provide an outlet for visual wildlife conservation as well through my bird photography

Westchester Photographic Society is proud to invite the public to see Cameron Darnell. June 4, 7:30 pm. To register email Deborah@wpsphoto.org. Use "Cameron Darnell", June 4, as subject.
